1. Overview

This PRD defines the product requirements for enabling **PEA (Preliminary Ecological Appraisal) Survey and Reporting** on the BNGAi web application. It extends PEA Wizard payroll PRD to a broader, end-to-end enablement model that covers contract structuring, SKU UX, wallet ledger entries, delivery handoff via JIRA, ground-survey UI changes, in-app request flow, and statutory PEA report generation.

The capability spans BNGAi's two contracted customer groups — **wallet-based** and **non-wallet-based** — and across four enablement scenarios. Retail customers are explicitly out of scope for this release.

2. Background & Context

PEA is a statutory deliverable submitted early in the UK planning process to identify habitats and protected species on a development site. However, customers acquire the right to use PEA in different commercial structures depending on their contract type, and the platform today lacks first-class support for:

- Selling PEA as a contractual add-on alongside standard SKUs.
- Enabling PEA mid-contract on selected projects without re-papering.
- Supporting non-wallet customers who consume PEA without a credit-deduction model.
- Driving downstream operational consequences (delivery handoff, ground-survey adjustments, statutory report output) once a project is PEA-enabled.

This PRD closes those gaps by formalising customer groups, scenario-specific user journeys, and the platform changes needed across BNGAi (web app), Jarvis (internal CRM/admin), and the wallet ledger.

3. Goals & Success Metrics

Goals

- Make PEA a sellable, configurable add-on within BNGAi's commercial stack for wallet customers.
- Allow Jarvis-driven enablement of PEA on a per-project basis for non-wallet customers and for wallet customers who add PEA outside the original contract.
- Drive consistent downstream behaviour (ledger entry, JIRA delivery ticket, ground-survey UI, statutory report output) once PEA is enabled for a project.
- Provide a frictionless in-app path for customers to request PEA enablement on a specific project.

Success Metrics

Metric	Target
% of new wallet contracts that include the PEA add-on (Scenario 2.1)	Baseline + tracked QoQ
Time from PEA request submission to project enablement (Scenario 2.2)	≤ 2 business days (P50)

/ 3)	
PEA-enabled projects that successfully generate a PEA report	≥ 95%
Mismatches between wallet ledger entries and JIRA delivery tickets	0 in first 30 days post-launch
Support tickets due to confusion over PEA enablement status	< 5 in first 30 days post-launch

4. Customer Groups & Scenario Matrix

#	Customer Group	Commercial Model	Scenario	In Scope?
1	Retail	Self-serve, payment + invoice generation, pending-dues logic	n/a	 Out of Scope
2.1	Wallet-based (contracted, standard SKUs at discounted pricing)	PEA sold as part of the original contract	Standard SKU + PEA add-on, deducted from wallet	 In Scope
2.2	Wallet-based	PEA not part of the original contract; customer enables it for selected project(s)	Jarvis-driven, per-project, wallet deducted	 In Scope

3	Enterprise (Non-wallet-based)	No wallet construct; non-standard contracts	Jarvis-driven, per-project, no wallet deduction (enablement only)	 Out of Scope
---	--	---	---	--

5. Scope (In / Out)

In Scope

- Contract structuring & SKU selection UI changes for wallet customers (Scenario 2.1)
- Org-level add-on pricing for PEA per project based on hectarage range and SKU selection
- Wallet ledger capture of PEA add-on as a discrete line item with linkage to project
- JIRA delivery ticket fields/labels indicating PEA is required for a project
- In-app "Request PEA for this project" flow with notification email to Product, Delivery, CS, and Sales
- Ground survey UI changes to support PEA-enabled projects
- PEA report generation/export from completed survey data

Out of Scope

- Retail customer flow (payment, invoice generation, pending dues)
 - Self-serve PEA price configuration by Org Admins
 - Refund / deduction-reversal flows
 - Internal usage dashboards and customer-facing wallet/PEA usage reports (deferred)
 - Jarvis-driven, per-project PEA enablement for retail and enterprise
-

6. User Journey — Scenario 2.1 & 2.2: Wallet Customer with PEA in Contract

6.1 End-to-End Flow

Scenario I : User opts in at the time of project creation

1. User's organisation is assigned a **wallet balance** at contract signing.
2. The contract includes **standard SKUs with PEA as an add-on**.
3. The **PEA add-on price is defined at the org level** in Jarvis .

4. When the user creates or onboards a project in BNGAi, the **SKU selection page** exposes PEA as an explicit, selectable add-on
5. Selecting PEA on the SKU page triggers a wallet deduction that is captured as a discrete **ledger entry**
6. A **JIRA delivery ticket** is created/updated to reflect that PEA is required for the project
7. On the BNGAi web application, projects flagged as PEA-enabled show **PEA-specific UI on the ground survey**
8. Report section gets enabled to display PEA upon successful purchase
9. Once survey data is captured, the user can **generate and export a statutory PEA report**

Scenario II : User opts in at the time of ground survey assignment

1. Wallet is deducted upon successful assignment
2. Ledger is updated with a PEA entry referencing the project
3. An email notification gets triggered to delivery that PEA is required for Project XYZ within org ABC by the request of <email ID>
4. Jira gets updated with the bolt on custom field
5. Report section gets enabled to display PEA

Scenario III : User opts in post ground survey assignment

1. CSM / Sales logs in to Jarvis
2. Searches the organization and clicks on 3 dots
3. Selects “Record Debit” option
4. Inputs amount to be deducted and selects the project
5. Upon successful receipt of the request the PEA for the user is enabled
6. Jira ticket is created for RnD to manually unlock ground survey assignment with PEA checkbox being visible
7. Report section gets enabled to display PEA upon successful purchase

6.2 Add-on Pricing Model (Org-level Flat)

ID	Requirement
FR-2.1-01	PEA add-on price is configured as a GBP amount per project at the organisation level in Jarvis for different hectare ranges and SKU

FR-2.1-03	Pricing changes in Jarvis apply only to projects created <i>after</i> the change; previously enabled projects retain their original price.
FR-2.1-04	BNGAi fetches the current org-level PEA price at the moment PEA is selected on the SKU page.

6.3 SKU Selection UI Changes

ID	Requirement
FR-2.1-05	The SKU selection page must render PEA as an add-on row below the base SKU(s) with: name ("Preliminary Ecological Appraisal"), short description, and the org-specific flat price in GBP.
FR-2.1-06	The PEA row is only visible to wallet-based orgs whose contract includes the PEA add-on entitlement.
FR-2.1-07	Selecting PEA shows an updated order summary with the base SKU price + PEA add-on price + total, and the resulting post-deduction wallet balance .
FR-2.1-08	If the wallet balance is insufficient for base SKU + PEA, the PEA toggle is disabled with a tooltip ("Insufficient balance — contact your CSM").
FR-2.1-09	Confirmation requires explicit user click ("Confirm & Continue"); no auto-confirm.

6.4 Ledger / Wallet Capture

ID	Requirement
FR-2.1-10	The wallet ledger must record the PEA add-on as a separate line item distinct from the base SKU deduction, with: type = "PEA Add-on", project ID/name, amount (GBP), user ID, timestamp, and originating contract reference.
FR-2.1-11	Both deductions (base SKU + PEA) must succeed atomically; if either fails, neither is applied and the user sees an error.
FR-2.1-12	The platform header wallet balance updates immediately on success.

6.5 JIRA Delivery Ticket Integration & Email Notification

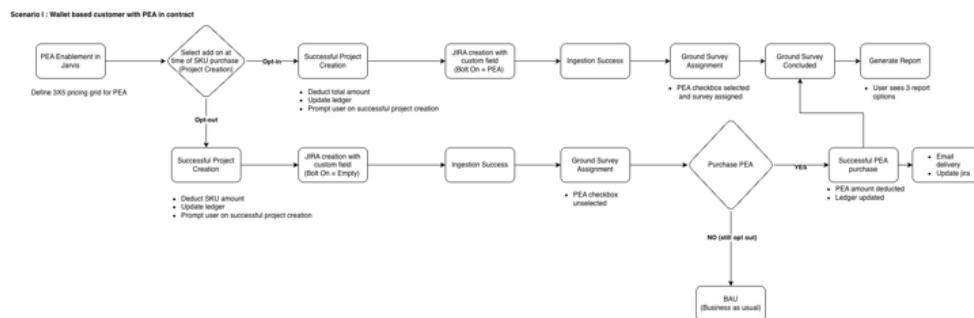

ID	Requirement
FR-2.1-13	When PEA is selected as part of SKU purchase, the corresponding delivery JIRA delivery ticket must include a "PEA Required" in the bolt-on (custom field)
FR. -2.1-14	The ticket body/description must reference the provided ID and the PEA enablement timestamp so delivery can scope work accurately.
FR-2.1-15	If PEA selection fails after ticket creation (rare edge case), the ticket must be reverted/updated to remove the PEA flag.

FR-2.1-16	The notification email must be sent to: Customer Success Manager, Sales owner, Product, and Delivery (using the relevant DLs / assigned owners on the org record).
FR-2.1-17	The email must include: requesting org, requesting user, project ID + name, current contract type (wallet / non-wallet), and the optional note.

6.6 Ground Survey UI Changes (PEA-enabled Projects)

- Ground survey for PEA-enabled projects must be visually distinguishable (e.g. PEA badge on project header).
- Additional survey inputs/sections will be required to capture habitat and protected-species data needed for the statutory PEA report.

USER JOURNEY for Scnerio 1 and 2

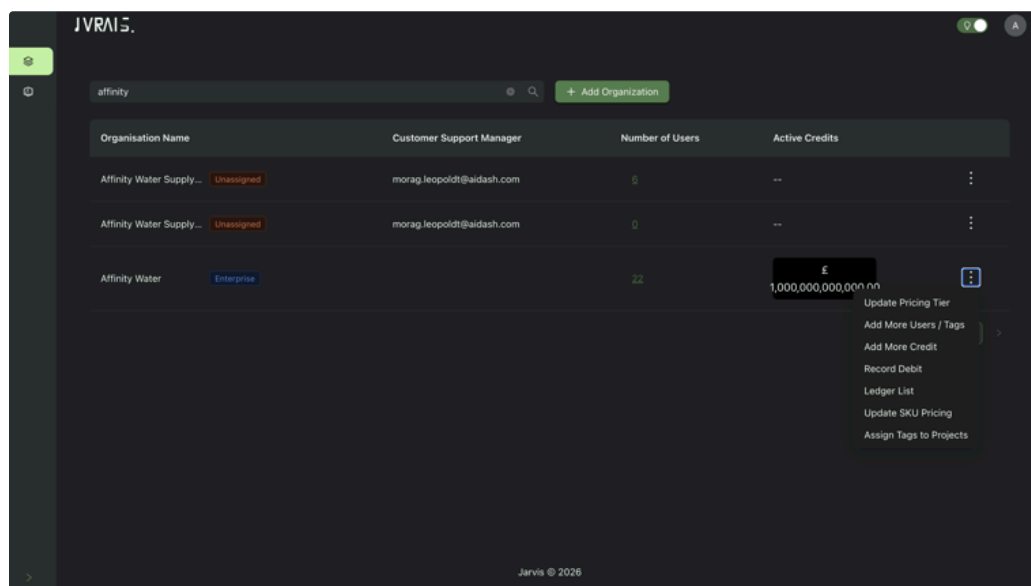

7. Events

Event Name	Trigger	Amplitude	Intercom	Remarks
pea_sku_purchase	when pea purchase successful at	y	y	NA

	time of SKU purchase			
pea_ground_survey_purchase	when pea purchase successful at time of ground survey assignment	y	y	NA
pea_report_generated	pea report is successfully generated	y	y	NA

8. Jarvis References

Update price option → “Update SKU / Add-on Pricing” instead of “Update SKU Pricing”

Add on selection

Add on values = PEA for now. Future additions → HMMP, PD, Other surveys, etc.

9. Out of Scope

- **Retail customer flow** — payment processing, invoice generation, pending-dues logic.
 - **Enterprise customer flow**
 - Off system PEA opt in
 - PEA opt in following ground survey conclusion
 - Refund / deduction-reversal / disablement flows.
 - Customer-facing wallet/PEA usage reports.
 - Modifications to existing top-up / credit-purchase flow.
